THE ENFORCER®
TRANSPORT SECURITY, INC.

with cargo theft surging past $450 million in reported losses last year alone, securing America's freight has never been more critical.

In this high-stakes environment, the 45-year partnership between Transport Security, Inc. (TSI) and ABLOY Critical Infrastructure, now under ALCEA, stands as a rare example of enduring innovation in supply chain security.

From mechanical padlocks tested on frozen Minnesota roads to intelligent access systems used by today's largest fleets, the alliance has consistently delivered what the transportation industry needs most: solutions built to outsmart evolving threats.

a shared vision for safer freight.

Founded in 1982 in Waconia, Minnesota, TSI was born out of a singular mission: to prevent cargo theft. At the time, theft and tampering were rising sharply, and conventional locks weren't performing to the demands of the transportation industry. TSI began testing heavy-duty locks by mounting them on fleet vehicles through harsh Midwest winters. By spring, only the Finland-based ABLOY padlock was still functioning.

"From the start, ABLOY's engineering gave us an edge," said Brian Falk, CEO of TSI. "Their disc cylinder cores were unlike anything else on the market, and they laid the foundation for what would become the ENFORCER® product line."

innovating cargo protection: The ENFORCER® legacy.

Innovation isn't a side story at TSI; it's their origin story. Every ENFORCER® lock was engineered not as an off-the-shelf solution, but as a product designed to solve a specific vulnerability in cargo transportation.

- Adjustable Trailer Door Locks were created to address the unpredictable fit of swing doors across different fleets and containers.
- Roll-Up Door Locks were designed to mount internally, reducing theft risk during high-frequency delivery stops.
- Air Cuff® Locks immobilized tractor brake valves, preventing unauthorized movement during downtime.
- King Pin Locks were introduced to secure dropped trailers at remote lots.
- Seal Guard™ Locks protect cargo seals from tampering while in transit or at cross-docking facilities.
- Each innovation combined real-world fleet insights with ABLOY's uncompromising locking technology, making reliability the hallmark of the ENFORCER brand.

partnership with a purpose.

What makes the TSI/ALCEA partnership unique isn't just longevity; it's a shared vision to stay ahead of the threat landscape. According to Dominique Jardin, Managing Director of ALCEA North America, that mission has never been more relevant.

"Our job is to equip fleets with the highest level of physical and digital security, and TSI has proven to be an incredible partner in delivering that vision to the transportation sector."

Together, the companies continue to anticipate not just what the industry needs today but where it's going tomorrow.

CLIQ®: future-proofing freight security.

In an industry grappling with high driver turnover and growing regulatory complexity, physical key management has become a major operational risk. When a driver leaves a fleet, voluntarily or not, every missing key creates a potential security breach, forces costly rekeying, and adds administrative burden.

That's exactly the kind of challenge the ABLOY PROTEC² CLIQ® system was built to solve. This hybrid electromechanical solution fuses the strength of ABLOY's mechanical cores with digital intelligence, enabling programmable, revocable, and auditable key control.

Each CLIQ key is uniquely assigned and digitally managed. If a driver leaves the company, their access can be revoked instantly, no need to track down keys or replace expensive lock hardware. Every lock interaction is logged, creating a built-in audit trail.

"At its core, CLIQ is about control and traceability. That kind of accountability is a game-changer for fleets with high-value cargo." says Jardin.

For larger operations, CLIQ integrates with ERP and facility management systems, allowing access provisioning to scale across thousands of locks and users. But for small and mid-sized fleets without IT teams, it's also designed to be intuitive and easy to implement.

"We're in a new era," says Falk. "Fleets want a hybrid approach. Mechanical durability for harsh environments, paired with digital oversight that satisfies auditors, insurers, and customers alike. CLIQ hits that sweet spot."

not just padlocks: solving real problems.

Transport Security, Inc. combines the focus and responsiveness of a specialized security firm with the scale, infrastructure, and expertise to serve some of the largest intermodal transportation companies in North America. The company has invested in automation, advanced keying technology, and integrated CRM systems to support long-term growth as it transitions into a new 14,000 SQF headquarters complex in late 2025.

“We’re more than a hardware company,” says Falk. “We’re a products and services company that solves security problems. That’s why the ENFORCER brand resonates. Our customers know we’ll help them get the job done right, and be there when it counts.”

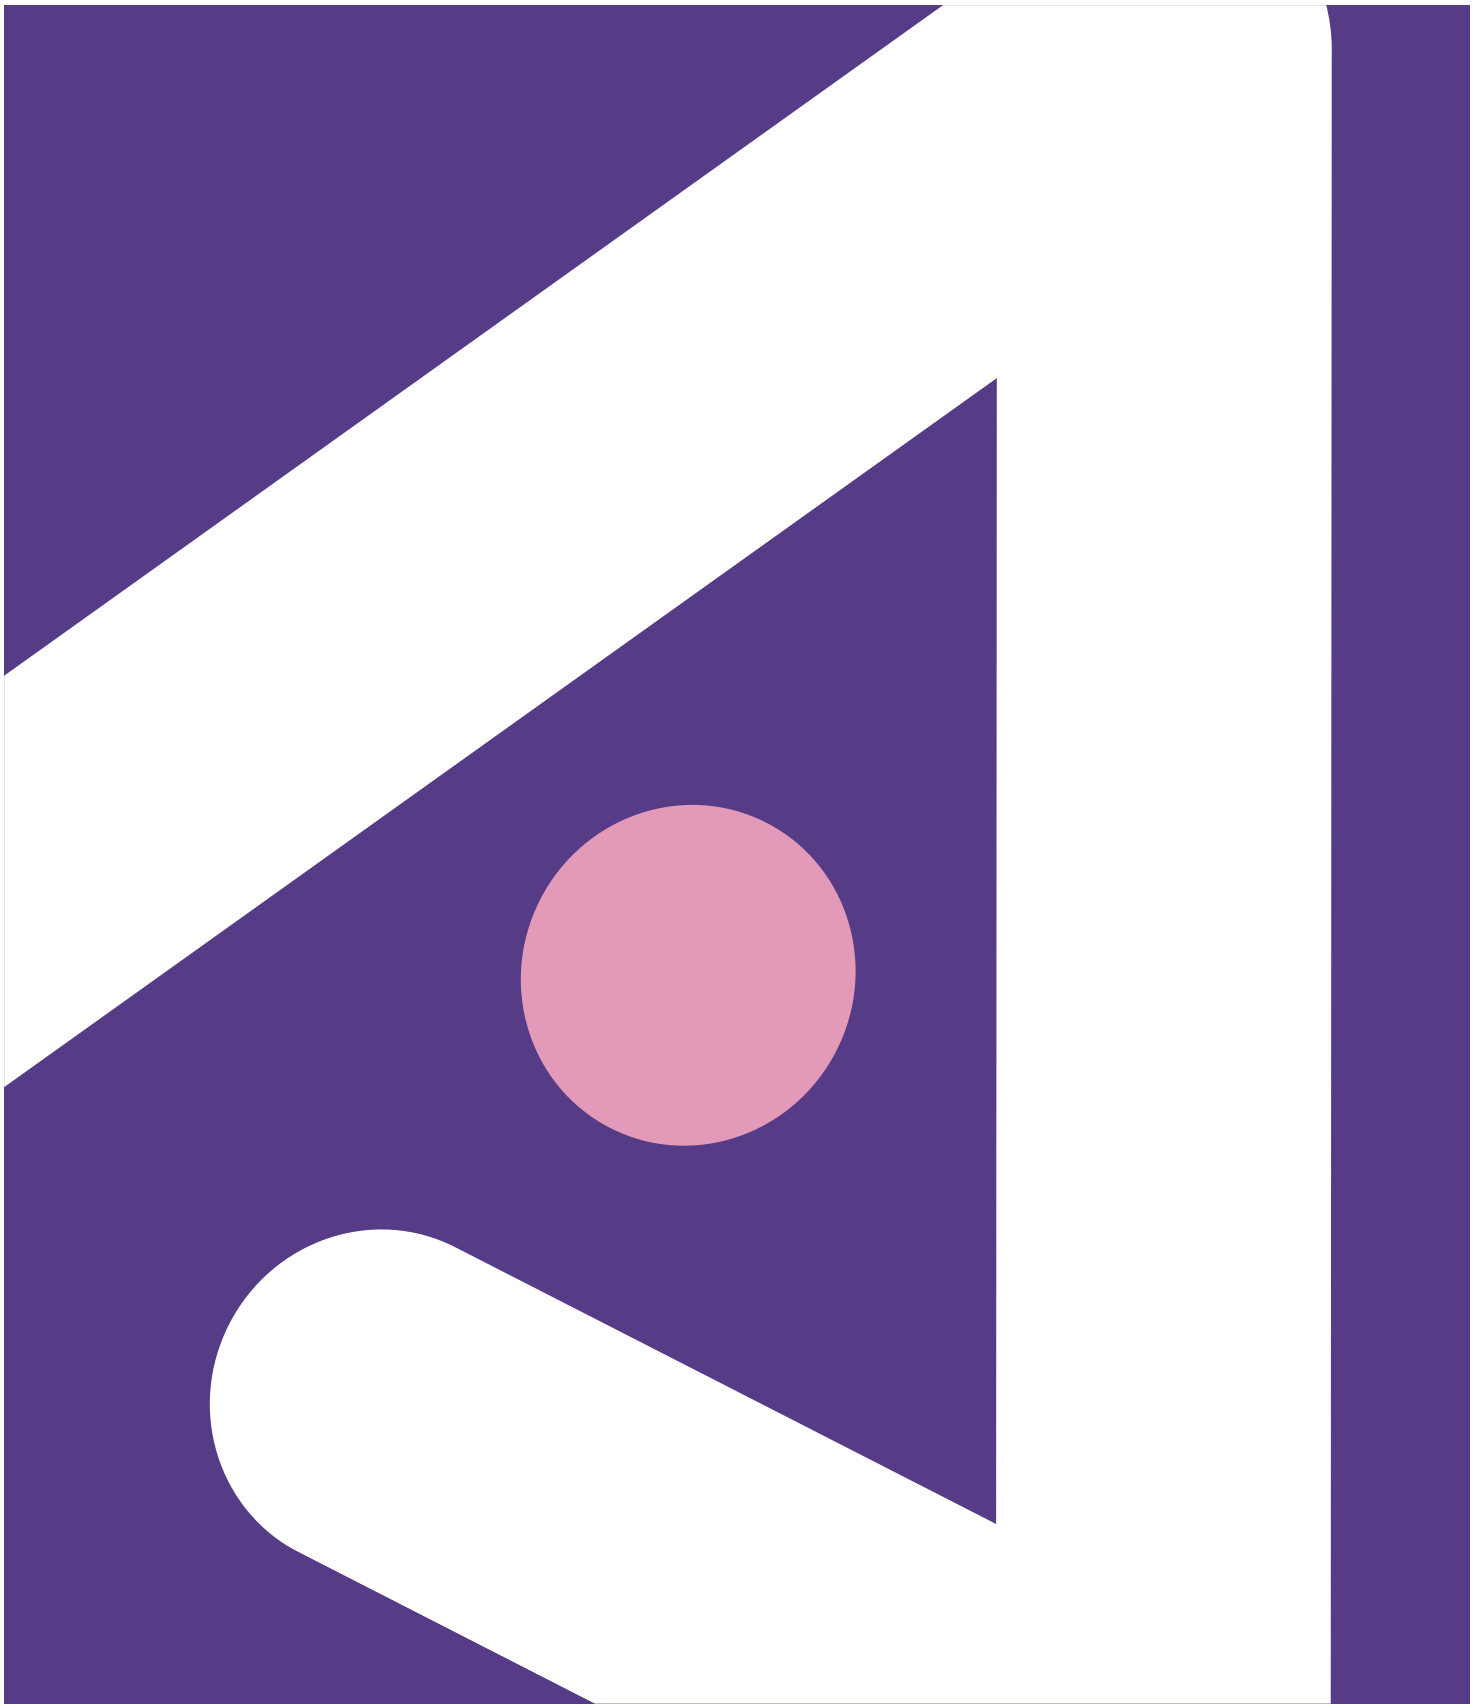

As the partnership between ALCEA, ABLOY, and TSI enters its fifth decade, both sides remain committed to delivering what today’s transportation sector needs most: security, simplicity, and peace of mind. From padlocks to intelligent access systems, one thing is clear: the ENFORCER name, powered by ABLOY, still carries some serious weight.

“For the past 20-plus years, Prime has utilized the ENFORCER Abloy locks to secure our loads as we move throughout the United States and Canada. The lock has proved to be a deterrent to cargo thefts and has saved numerous claims... Transport Security delivers the best up-to-date locking system on the market!” Bill Boehning, Director Corporate Security at Prime Inc.”
